Table of Contents

Introduction	13
Chapter 1 Power electronics	15
1.1 Barrier-resistor elements – baristors and their application	15
1.2 Low-voltage converters for LED power supply	21
1.3 Two-channel voltage converter with electric couple isolation	38
1.4 Symmetrical voltage regulator	39
1.5 Reversible logic level converter	41
1.6 A bipolar voltage stabilizer	42
1.7 Synchronously adjustable bipolar voltage source	47
1.8 Adjustable stabilized voltage-inversion power supply	48
1.9 The semiconducting limiter of current – baretter	50
1.10 Stabilizer (load current limiter)	53
1.11 Precision voltage damper	54
1.12 Controllers of mains power supply	55
Indicators of power source shutdown	59
1.13 Blown-fuse indicators for AC and DC current circuits	61
1.14 Load-breaking isolator controlled by the logic level	63
Chapter 2 Measuring equipment	65
2.1 Indicators of “phase” based on modern elements	65
2.2 Audiovisual batteryless “phase” indicators	69
2.3 Batteryless light-sound indicator of a “phase”	71
2.4 Electric field indicators based on negavaristors	71
2.5 Electric field indicator based on the analog of the injection field effect transistor	73
2.6 LED electric field indicators	74
2.7 Field and voltage indicator with input protection	76
2.8 Microwave detector	77
Literature	79
2.9 Colour-dynamic indication of a signal level	79
Literature	87

2.10	Colour-dynamic measuring devices	87
	Literature	91
2.11	Polychrome battery discharge indicators	91
2.12	LED battery voltage indicator	93
2.13	Batteryless output power indicator	94
2.14	Electrolytic capacitor tester	96
2.15	Linearly-inverse bridge and a modulated current bridge	97
2.16	Pulse amplitude-to-width converter	101
2.17	Digital sweep-frequency generator	103
2.18	Batteryless indicator of CMOS logic levels	104
2.19	A device for adjustment of radio equipment.	105
2.20	Electronic thermometer with a sensitive element on the diode	107
2.21	Simple metal detectors	108
2.22	Bridge-style metal detectors with shock excitation	109
2.23	Integrated beta-gamma-radiometer	111
2.24	X-ray and gamma indicator with a low-voltage power supply	112
	Literature	114
2.25	Universal radiation indicators and their application	114
2.26	Early diagnostic instrument test for radiogenic calcination of biological tissues.	116
	Literature	118
Chapter 3	Generators	119
3.1	Forward-bias sensors in controlled high frequency generators	119
3.2	The pulse generator based on the analog of a lambda diode	121
3.3	A sine wave generator based on the λ -transistor	122
	Literature	124
3.4	Switch of frequency control circuits	124
3.5	Sound LR-generator	126
3.6	Low-voltage LC-oscillators	127
3.7	Schmitt trigger oscillators	131
3.8	Colour-dynamic frequency indication in pulse oscillators	133
3.9	Pulse oscillators: elements of sound indication.	134
3.10	Pulse oscillators based on the analog of injection field-effect transistors	137

3.11	Beeper based on the analog of an injection-field transistor	142
3.12	Simulator of stringed instrument sounds	142
3.13	Oscillator with adjustable pulse duration	143
3.14	Oscillator with adjustable bipolar pulse duration	144
3.15	Pulse oscillator based on a CMOS switch	145
3.16	IR pulse oscillators	145
3.17	Optoelectronic signal oscillator/tester	147
3.18	Frequency modulated VHF oscillator	148
3.19	Phase-modulated triangular wave oscillator	150
3.20	Additive triangular signal shaper	150
3.21	Non-capacitive generator of triangular-form voltage	152
	Literature	154
3.22	Functional generator	154
	Literature	156
3.23	Inverse functional generator	156
	Literature	157
3.24	Formers of three-phase voltage	157
3.25	Wide-range formers of three-phase voltage and their application	161
3.26	Oscillators for games and experiments	162
Chapter 4	Amplifiers	165
4.1	Main characteristics of operational amplifiers	165
4.2	Standard connection circuits of operational amplifiers	165
4.3	Variable signal amplifier/attenuator	169
4.4	Simple LFA	171
4.5	Class-D Amplifiers	172
4.6	LF-amplifiers based on negavaristors	174
	Literature	180
Chapter 5	Filters	183
5.1	LC- and RC-filters with an adjustable bandpass	183
5.2	Filters with smooth adjustment of transmission coefficient within the limits of $-K \dots K$	186
	Literature	190
5.3	T-filters and their application	191

5.4	Notch filter for intermediate frequencies	195
	Literature	198
5.5	Gyrator filter based on electronically tuned transistors	198
5.6	Multichannel valve quasi-filter	198
Chapter 6	Electronic switches.	203
6.1	MOS analog of thyristors.	203
6.2	Push-button thyristor operation	205
6.3	One-button CMOS switch	214
6.4	Laser pointer switches	215
6.5	Thyristor switch	218
6.6	Series-connected thyristor switch	218
6.7	Multi-switch lights control. For corridors and hallways.	220
6.8	Pulse-duration control switch.	221
Chapter 7	Communication	225
7.1	Wire telegraphy device	225
7.2	Wire telephony device.	225
7.3	Three-channel double-wire communication device	226
7.4	Three-user communication device	228
7.5	Communication device with a power supply of 230V	230
7.6	Optical transmitter of low-frequency signals	231
7.7	MultiVOX circuit for transceiver	234
7.8	Automatic electronic telegraph key.	238
7.9	Optoelectronically-controlled telegraph key	239
7.10	Three-phase signal former for SSB-radio station	241
	Literature	242
7.11	Switch/range indicator	244
	Literature	249
7.12	High-frequency cable channel switch	249
7.13	Program selector	251
7.14	Diode signal switches	252
7.15	Diode resistive attenuator	255

Chapter 8 Security and safety systems	257
8.1 Personal protection alarms	257
8.2 Coded locks on thyristors	260
8.3 High security coded locks	263
8.4 Simple security devices.	268
8.5 Sound alarm security devices	270
8.6 Security devices based on CMOS microcircuits.	272
Specifications of the device:	273
Chapter 9 Electronics for industrial purposes	277
9.1 Gas- and temperature-sensitive relay	277
9.2 Gradient relay	278
9.3 Sensor and capacitive relay	282
9.4 Unpriority logical units	284
Literature	286
9.5 Reversible logic level regenerators	286
9.6 Pulse-duration selector based on a poly-compactor microcircuit.	287
9.7 Analog timing devices.	289
9.8 Timing devices based on CMOS switches.	290
Literature	291
9.9 Automatic load switch and timer	292
9.10 Thyristor timing devices	292
9.11 Remote monitoring of operating parameters for a power line	294
9.12 Radio frequency method for studying reaction kinetics	295
Chapter 10 Electronics in household use	301
10.1 Output stages of a light-dynamic device	301
10.2 Colour-controlled light-emitting diode night lamp with the mains power supply	302
10.3 Saturation of water with colloidal silver.	303
Literature	304
10.4 The use of "silver water" for the treatment of thermal burns	305
10.5 Water activators.	306
Literature	308
10.6 Non-contacting liquid activator.	309

Literature	313
10.7 Device for washing clothes with ultrasound	314
10.8 Automatic light source with a solar cell	316
10.9 Solar-powered night light with Li-Ion backup	319
10.10 Automatic light control device	319
10.11 Electric radioactive dust trap devices (electric air cleaner)	321
Literature	324
10.12 Spark leak detector.	325
10.13 Protection of a filament in powerful electro vacuum devices.	326
10.14 HF oscillator with "digital" signal modulation	330
10.15 Chess clock for playing in "Chess-timebreak" tournaments	330
10.16 LED & lamp dimmer – the two-pole device.	331
Literature	336
Chapter 11 Medical devices and equipment	337
11.1 Device for the detection and control of biologically active points.	337
11.2 Circuits for the diagnostics of biologically active points	338
Literature	340
11.3 Device for the detection and stimulation of biologically active points.	341
11.4 "Antimigraine" oscillators	344
Literature	350
11.5 Color heals	350
Literature	352
11.6 Mood and health oscillator	352
11.7 Color scale oscillators	354
11.8 Device for psycho emotional correction	356
Literature	358
11.9 Simulator of surf noise	359
11.10 Sleep generator — sea sounds from a box	360
Literature	362
11.11 Devices for ultra-tone therapy	362
Literature	365
11.12 Gas discharge imaging devices (Kirlian photographs)	365

11.13	Circuitry for "Kirlian" photographs	367
11.14	Oscillator for the obtaining of "Kirlian" photographs	373
Chapter 12	Electronics in the study of unusual phenomena.	377
12.1	Paradoxical experiments and their explanation.	377
	Literature	382
12.2	Instrumental methods for identification of underground anomalies.	383
	Literature	388
12.3	Aero-ion indication of energetically stressed zones	389
	Literature	390
